
oe default email HELP!! Making OE default mail program

Posted by Ross Dillon - 2008/06/26 11:30

Replaced O 97 with OE due to ease of use. Now, I am beginning to regret it. 1) IE4 does not recognize OE in the internet option|programs area for email 2) OE keeps rejecting the selection to make it the default email program. Any help would be appreciated rosc...@ix.netcom.com

oe default email HELP!! Making OE default mail program

Posted by John Vogel - 2008/06/26 11:30

you need to tell OE it is the default first. check under Tools | Options and the General tab there is a check box. mi...@discover.net Ross Dillon wrote in message <348aae58.791...@nntp.ix.netcom.com... you need to tell OE it is the default first. check under Tools | Options and the General tab there is a check box. (Yes, but most people try this first and it does not work.) I too had the same problem in OE and IE4 but found a possible solution that is detailed in the MS Knowledgebase Article ID: Q174265. The problem can occur if you installed Service Pack 1 after installing IE4 (and a few other possibilities related to installing something in the wrong order). It seems the solution is to uninstall IE4 and reinstall it. I'll try that next.
